

Please provide feedback on the course and instructor in general. What have been strengths of the instructor and course? What could the instructor do to improve?

Comment

The instructor keeps the whole class highly involved and gives a lot of opportunity for participation. The instructor can prepare the students more for the quizzes on Friday in terms of explaining what things to study or review in specifics.

I was very impressed with the quality of the instructor and the level of clarity and passion that was displayed throughout the entire course. I was able to follow the direction of the class and I believe I learnt a lot regarding the subject matter as well as general takeaways regarding education. The specific strengths were clarity of explanation, use of examples and repetition to aid learning as well as comprehensive review of class material such as homework and quizzes. She was also extremely approachable and available to answer any queries or questions which was most helpful and I am extremely appreciative of this.

What are the most significant things you have learned from taking this course?

Comment

The basic fundamentals of statistics.

I learned a lot about the subject matter itself obviously and its application and uses. I also learned about better ways to study for example, covering material every day to prevent cramming towards the end. I also learned the importance of asking questions and participation in the aiding of my understanding of the material.

Evaluate your own work in this course. What have you done well? What could you do to improve your learning?

Comment

I have done well on the tests, participation, and homework. I could improve on preparing for class and quizzes.

I believe that I have attempted to keep up with class material as much as possible and made it a point to review notes before and after every class. This helped me in understanding concepts more clearly as the lectures/office hours provided a second opportunity to clarify any misunderstandings. I also believe that I was able to apply my knowledge well during examinations and quizzes and homework thus far. I hope to be able to continue this for the remainder of the term. There are a few ways I can improve. I would like to be able to do more practice exams leading up to midterms and finals in order to consolidate my knowledge better. I would also like to apply my knowledge in different concepts in order to challenge myself as to whether I truly understand the concepts as well as understanding its practical application in the real world.

How comfortable do you feel asking questions in class? How comfortable do you feel asking outside of class? What has the instructor done to encourage or discourage questions?

Comment

Very comfortable for both asking questions inside and outside of class. She has given a very flexible schedule for private questions or public questions

I felt very comfortable asking questions in class courtesy of the environment that was created by the Instructor. She encouraged class participation through the asking and answering of questions. I believe this helped a lot in understanding difficult concepts and it was helpful for me to hear other people's questions and queries as well. To encourage questions, the instructor advised everyone to stand by what they know and don't know and to embrace learning opportunities within the classroom.

Have you found this course challenging? Why or why not?

Comment

Yes because the material requires higher level thinking and it moves pretty fast

I have found this course fairly challenging due to both the subject matter as well as the intensity of the course. Having almost 2 hours of class on a daily basis means that it is very easy to fall behind should one fail to miss a lecture or fail to review the class notes prior/after a lecture. I enjoyed the challenge however and I believe that the frequency of class

ensured that ideas and concepts stayed fresh in my mind. The subject matter was difficult at times and resulted in me having to review material more than once to come to grips with it but upon understanding it the satisfaction of getting there on my own far outweighed the effort it took. All in all, great class.
